Fly with Confidence - Air Travel is Still Safe!

Did you know that traveling by airplane is safer than traveling by automobile? Air travel sees significantly fewer fatalities per billion miles when compared to automobiles. In fact, over the past decade airplane accidents have seen a general downward trend. Consider this when making your family's next travel plans!

Here at US Airways, we make our passenger's safety our top priority! We take precautions by equipping our planes with the latest safety features. Additionally, our airline professionals are fully safety trained and certified. Our airline sees fewer total fatalities compared to our competitors. We also experience fewer fatalities per billion seat miles when compared against the competition.

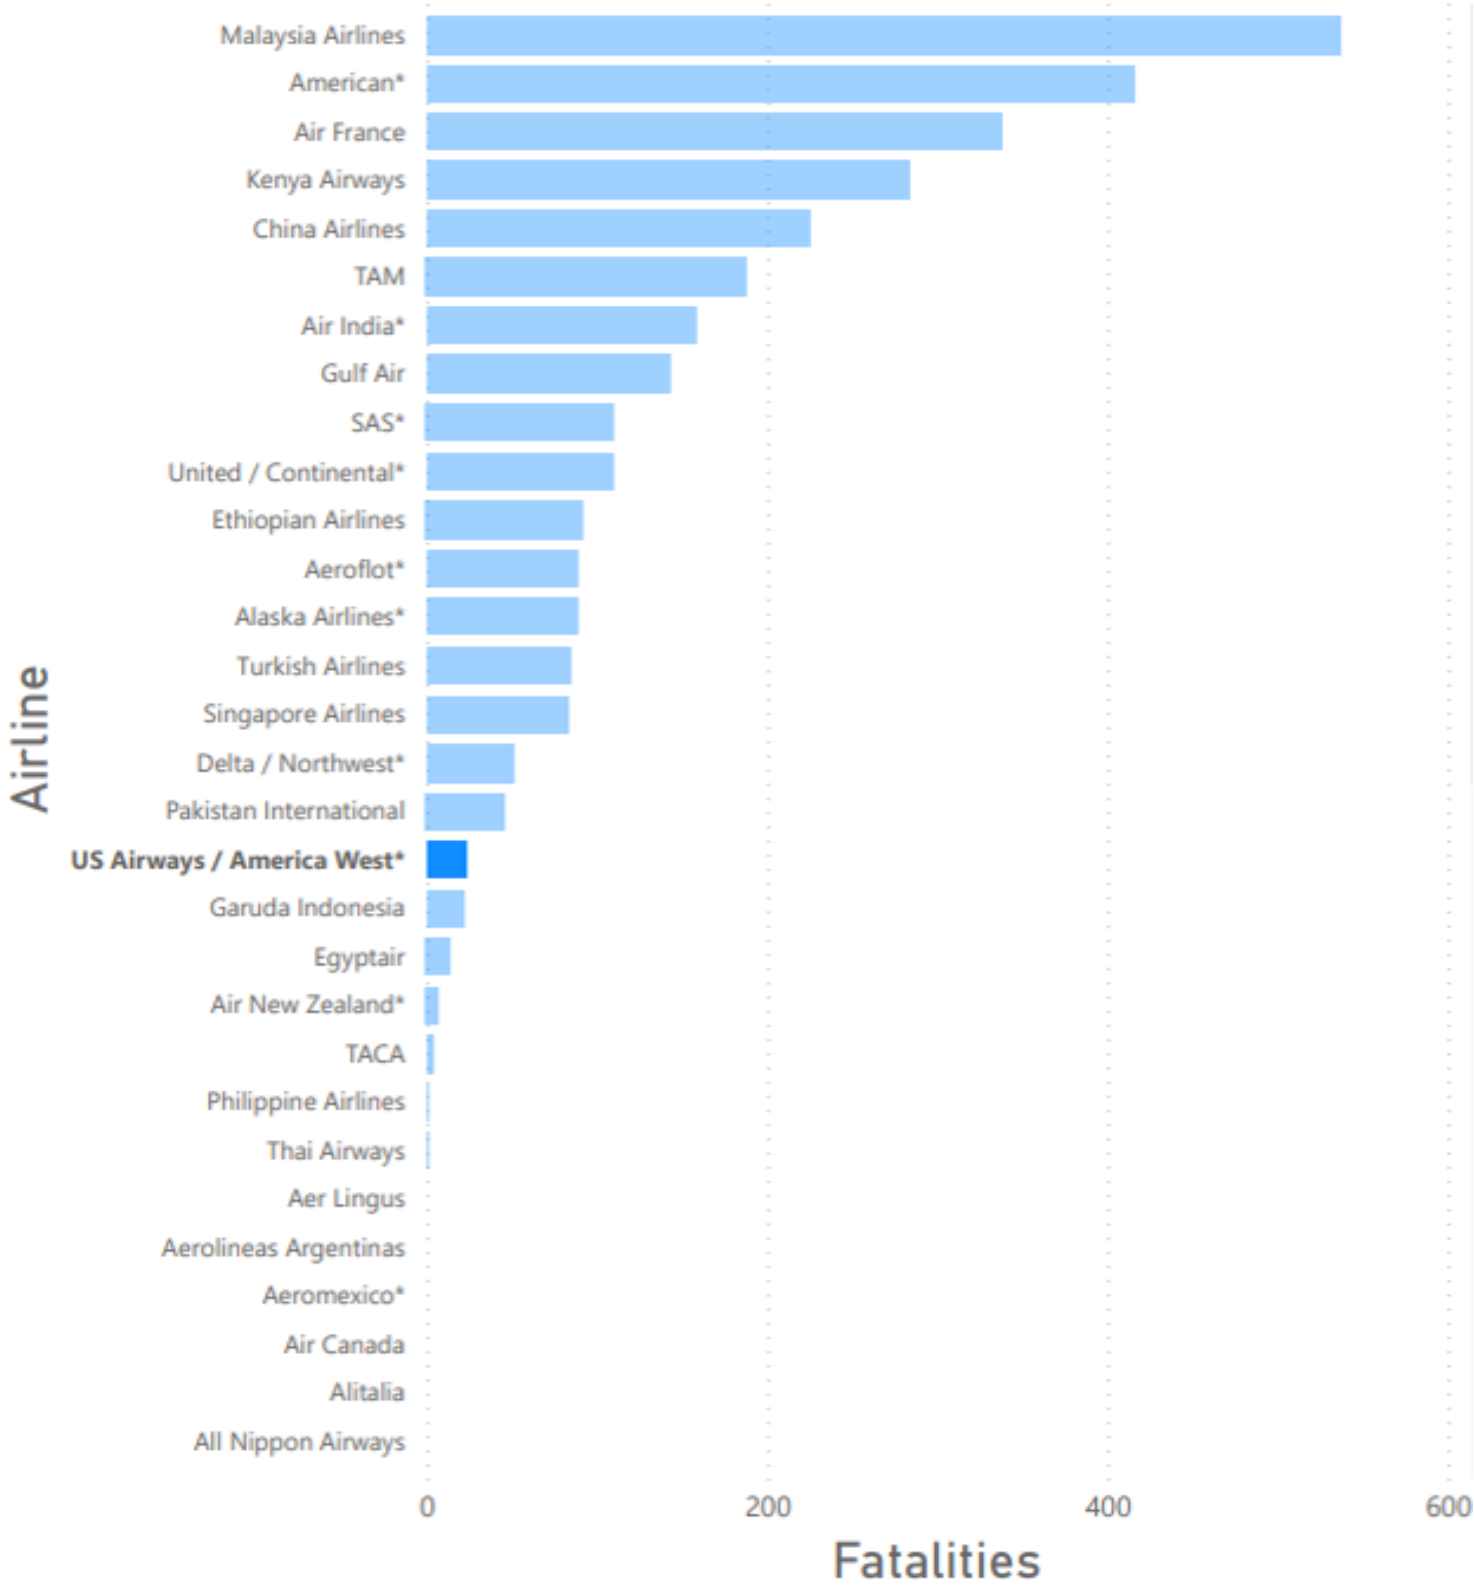

Let's dig into the data with a few key visualizations!

This bar chart highlights just how dramatic the difference in safety is when it comes to air travel versus automobile travel. The air travel fatalities per billion miles shown as the blue bar is significantly smaller than the automobile travel fatalities per billion miles represented as the orange bar.

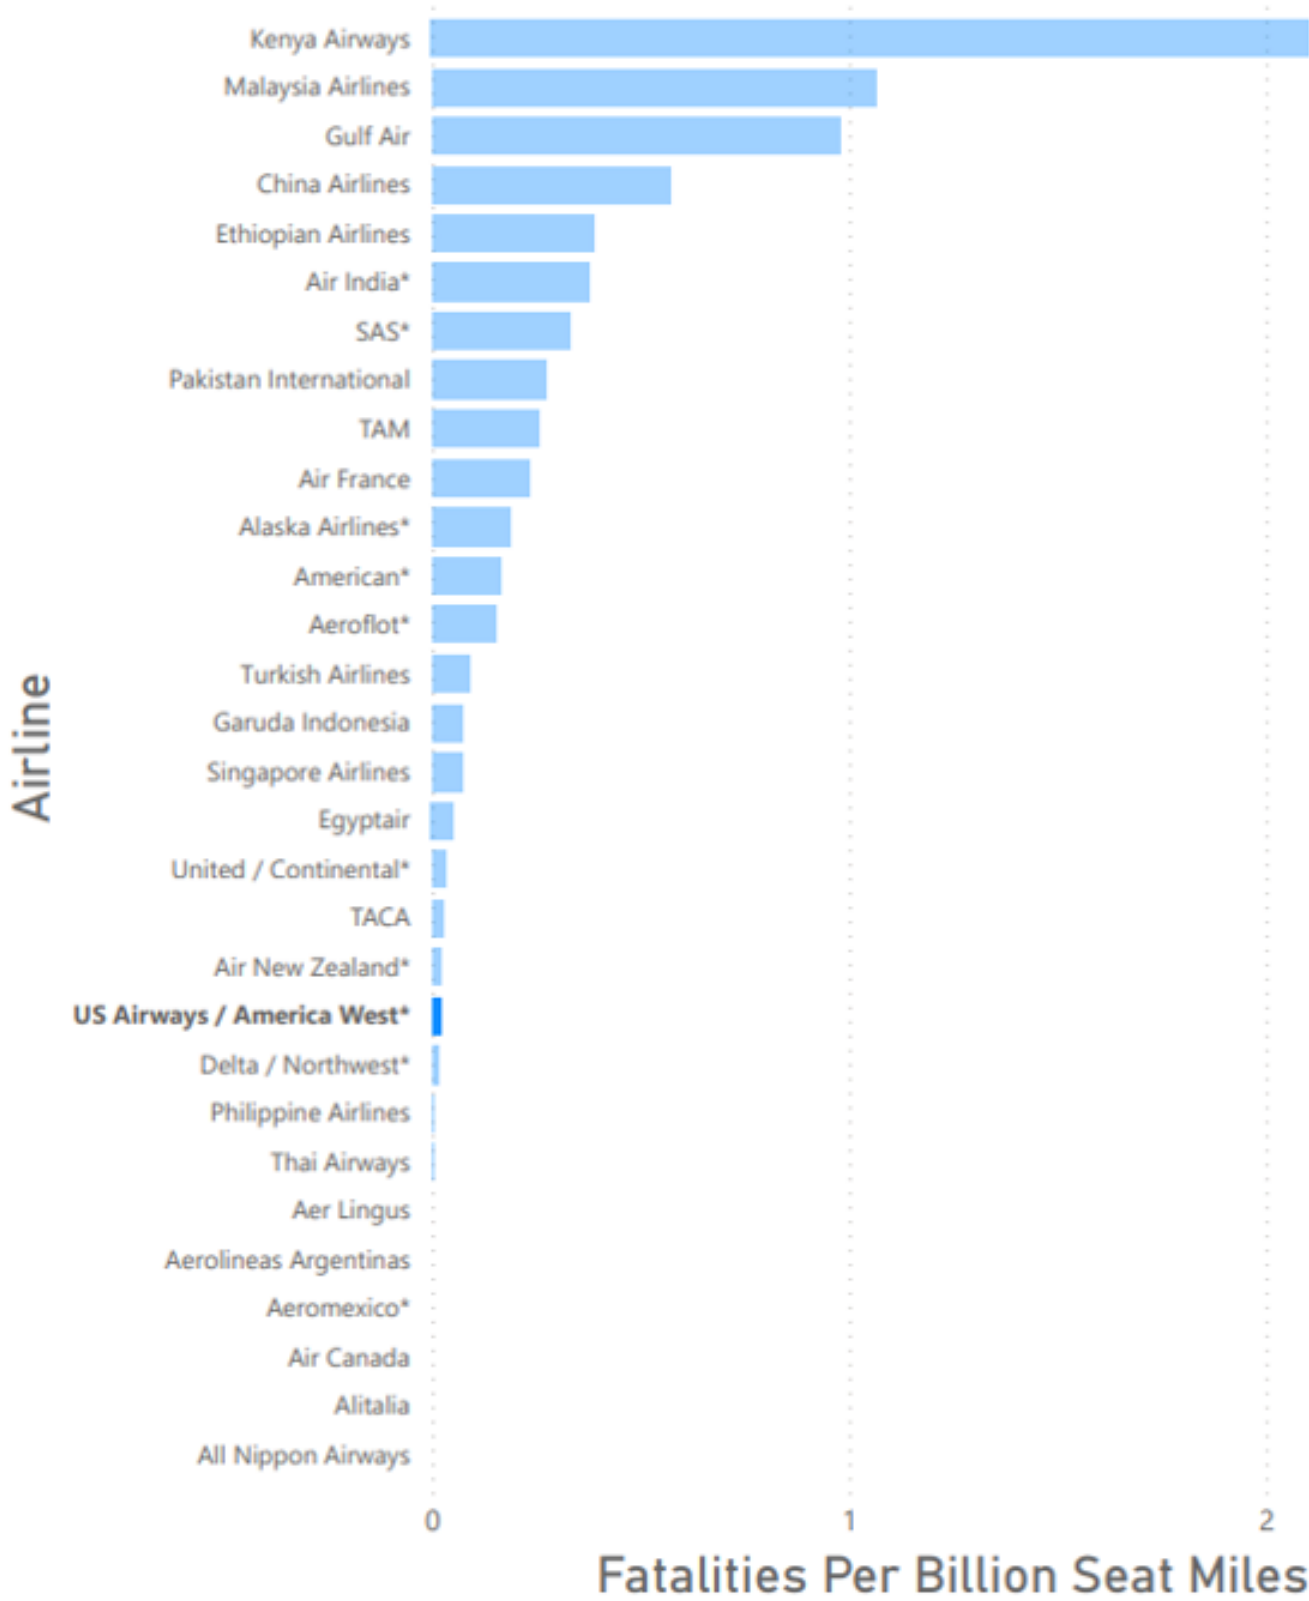

As demonstrated by the bar chart below, US Airways is one of the safest airlines for you and your loved ones. Over the past fourteen years, our airline has experienced significantly fewer fatalities than our competitors, who have seen three-hundred, four-hundred, and even five-hundred fatalities since the year 2000.

Fatalities by Airline (2000-2014)

US Airways also stands out in the bar chart below with some of the fewest fatalities per billion seat miles flown.

Fatalities Per Billion Seat Miles

The data speaks for itself! You and your family can fly with confidence when you book with U.S. Airways. Plan your next getaway today by visiting www.usairways.com/
